

Summary

Now that you have completed the lessons for this module, you should be able to:

- Identify the key policies, regulations, and guidance that influence the development of a product support strategy, and how they apply to the LCL.
- Differentiate between the roles of the program manager, LCL and other individuals and/or organizations in developing the initial product support strategy.
- Identify the LCL's role in the management processes associated with developing initial product support strategy, to include: preparing or assessing logistics requirements in the capability development document (CDD); defining logistics test points in the test and evaluation master plan (TEMP); and integrating the initial product support strategy with the acquisition strategy.
- Identify the LCL's role in the technical activities associated with developing initial product support strategies, to include: using modeling and simulation to reduce technology risk and to increase reliability and maintainability.
- Identify life cycle sustainment metrics and how they are used during the Technology Development phase.

Module Completion

You have completed the content for this lesson.

At this point you should have completed all of the lessons in this module.

Please take the Module Exam so you may receive credit for this course.
